

What PDUs aren't here?

I am not sure if there needs to be an addition of PDUs or if something is missing. I think the baseline of PDUs covers all areas and as new systems emerge the recurring themes remain. It will also depend on how the PDUs are implemented to inform the data they provide.

What PDUs are valuable?

Dead Reckoning is helpful in my field. If PDUs can provide actual updates to improve location data for dead reckoning for example it would be a helpful use case for collision detection and other navigational tasks. While conducting navigational tasks, service members must weigh risks while discerning their application of positioning data. If PDUs are used to support location positioning tasks, they can provide a clearer estimate to enable commanders to select their risk level.
